#### **CITY COMPOSITION OF A LEAD SERVICE LINE INVENTORY**

**MONTPELIER, IDAHO** – The City of Montpelier Public Works Department maintains an inventory of water service line material types for residences and businesses within the city limits. At this time the water service line materials for all addresses within the city are of an unknown material. In accordance with the EPA's forthcoming Lead And Copper Rule Revision<sup>1</sup>, the city is required to identify and inventory the locations of lead and galvanized steel service lines within Montpelier City limits.

City addresses with unknown water service line types will be mailed a letter in late April 2023. The letter includes instructions on locating the water service line as it enters the building or residence, how to perform a test to identify the water service line material type, and a form providing the material type back to the city. The lead and service inventory to the Idaho Department of Environmental Quality.
